## 1.0 SUMMARY

BCA Environmental Consultants, LLC (BCA) has performed a Phase I Environmental Site Assessment (ESA) of the IU Health Bloomington Hospital (Parcels C & D) property located at 608 W. Wylie St., Bloomington, Monroe County, Indiana 47403. The work was conducted within the framework of the ASTM 1527-13 and the All Appropriate Inquiry (AAI) Standards. The Subject Site is bounded by commercial and residential properties.

This assessment has revealed no evidence of Recognized Environmental Conditions or Vapor Encroachment Conditions currently in connection with the property, except:

1. IU Health Bloomington Hospital (Parcels C & D) (Subject Site), 608 W. Wylie St.

The Subject Site was historically residential until between 1965 and 1977 when it was developed as commercial/medical offices including a power generation facility for the Bloomington Hospital north of the Subject Site. This operation included three (3) 20,000-gallon diesel USTs. One (1) 500-gallon diesel UST was also observed on the Subject Site behind the Olcott Center at 619 W. 1<sup>st</sup> Street. In addition, a former automotive repair area was historically present in the ambulance repair shop directly east of the power generation facility. The types and amounts of chemicals historically used in the maintenance of vehicles is unknown.

The possible historical release of chemicals associated with the former automotive service area as well as the unknown status of the diesel USTs on the Subject Site is an environmental concern.

2. IU Health Bloomington Hospital (Parcel A), 601 W. 2nd Street

This property, adjacent to the Subject Site to the north across W. 1<sup>st</sup> Street operated as a hospital since at least 1967 and was a large quantity generator (LQG) of hazardous medical waste. A 1992 VFC document, #[22512698](#), indicates that numerous USTs were present on the property. Given that most hospitals utilize back-up generators and heat sources supplied by fuel in USTs, it is possible that some USTs could remain on the property. An NFA determination was made by IDEM in 1996 for a LUST incident on the property, but no letter could be located in the public file regarding this determination.

The potential presence of the petroleum USTs on this adjacent site is an environmental concern.

See sections 7.1 through 7.3 of this report for details of BCA's findings, opinions, and conclusions.

## 2.0 INTRODUCTION

## **2.2 Purpose**

BCA was requested and authorized by Mr. Alex Crowley, Director, Office of Economic and Sustainable Development, City of Bloomington, Indiana to perform a Phase I Environmental Site Assessment (ESA) of the IU Health Bloomington Hospital (Parcels C & D) located at 608 W. Wylie Street, 717 W. 1<sup>st</sup> Street, and 727 W. 1<sup>st</sup> Street in Bloomington, Indiana. This report is prepared for City of Bloomington Redevelopment Commission (User) and the City of Bloomington and is funded through a U.S. EPA Brownfield Assessment Grant to the City of Bloomington (Cooperative Agreement No. BF-00E03051). This report presents the information obtained during the investigation and provides findings, opinions, and conclusions based on the information.

## **2.3 Detailed Scope-Of-Services**

BCA performed this Phase I Environmental Site Assessment pursuant to the scope of work requested by the client. This work was performed in accordance with the "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process," ASTM E1527-13 (the Standard) with the exceptions noted in Section 2.5 below and the All Appropriate Inquiry (AAI) standard codified at 40 CFR 312 as updated December 31, 2013. To accomplish the goals set forth in the Standard and AAI, BCA personnel conducted historical research, a review of public records, interviews, and a site visit.

The scope of historical research conducted by BCA in the preparation of this Phase I site assessment included a search of Sanborn Fire Insurance Map coverage for the area of and around the Subject Site, a review of available city directory listings for addresses near the subject property, a review of historical aerial photographs of the subject property and surrounding land, a review of available Property Tax Records, and a review of available building permits.

The public records search included, but is not limited to, an examination of US EPA and Indiana Department of Environmental Management (IDEM) computer databases for sites that fall within the search radii that are published in the Standard. An effort was made to find specific information about the Subject Site and adjoining sites identified in this database search that could have an impact on the Subject Site. This effort included a review of files that are available online on the IDEM Virtual File Cabinet (VFC).

The site visit portion of the assessment included an inspection of the Subject Site and those parts of neighboring properties that could be seen from public rights-of-way around and near the Subject Site. Appropriate notes and photographs were obtained pursuant to the Standard.

#### **2.4 Significant Assumptions**

Assumptions made in the preparation of this report include the assumption that the environmental records obtained from the IDEM and US EPA internet sites are complete and up-to-date. It also has been assumed that information on groundwater flow and vapor migration in an area can *in general* be extrapolated from the local topography, surface drainage, investigations from local LUST, State Clean-up, and VRP sites, and published reports. BCA has assumed that all persons that were interviewed for this report have been truthful in their answers.

#### **2.5 Limitations and Exceptions**

BCA based the conclusions of this Phase I report upon the information described herein subject to the limitations attached to or described in the report. Because of the limited nature of the inquiry, BCA makes no warranties; either expressed or implied, that the site is free of contamination. BCA does warrant, however, that it performed this assessment in accordance with the level of care and skill ordinarily exercised by other persons or entities currently performing similar work and practicing under similar conditions.

#### **2.6 Special Terms and Conditions**

No Special terms or conditions apply to this Phase I report.

#### **2.7 User Reliance**

#### **4.2 Additional Environmental Records**

BCA searched IDEM's VFC on May 02, 2022 for any environmentally significant reports associated with the Subject Site or adjoining sites. In addition, environmental reports of the Subject Site and nearby sites not found in the VFC were reviewed and summarized below.

IU Health Bloomington Hospital (Parcels C & D) (Subject Site), 608 W. Wylie St.  
According to VFC documentation, three (3) 20,000-gallon USTs were historically present on the west side of the power generation building. During 1991, the

southernmost fuel oil tank was closed in place, while the central and northernmost fuel oil tanks were removed in order to make room for a new 20,000-gallon UST. During these activities it was noted that the northern and central UST pits had negligible contamination present in side-wall and bottom of pit samples. The southernmost tank pit was cut into the limestone bedrock to create a vault and had petroleum contaminated sand fill around the tank. The contaminated fill was left in place and a passive venting system was installed in the pit.

Phase I and Phase II ESA reports were completed for the overall former IU Health Bloomington Hospital site, including the Subject Site, by August Mack Environmental in 2018 and 2019 (AME 2018 & AME 2019). During the Phase II, two (2) soil borings were placed north and east of a former 500-gallon diesel UST south of the Olcott Center along Fairview Street. Two (2) soil samples from each boring were analyzed for volatile organic compounds (VOCs) and polycyclic aromatic hydrocarbons (PAHs). No compounds were detected that exceeded the Indiana Department of Environmental Management (IDEM) Remediation Cleanup Guide (RCG) screening levels (SLs) in the soils sampled. No groundwater samples were collected from either sampling location.

IU Health Bloomington Hospital (Parcel A), 601 W. 2<sup>nd</sup> Street

This property was formerly the main hospital building complex of the IU Health Bloomington Hospital. It adjoins the Subject Site to the north across W. 1<sup>st</sup> Street and operated as a hospital from sometime prior to 1967 until December 2021, when it was permanently closed due to moving to a new location.

The facility was listed in 2018 as a large quantity generator (LQG) of hazardous medical wastes (# IND984883017). Waste codes listed included: D001, D005, D007, D009, D010, D011, P001, F003, and F005. The facility also maintained an air permit (Source ID 105-000331) for three (3) natural gas-fired steam boilers and four (4) diesel fueled backup generators. Previously the boilers were fueled using No. 2 fuel oil, but that use was discontinued more than five (5) years ago. The backup generators were only occasionally used and were collectively fueled from one (1) UST. The facility also operated a medical waste incinerator until it was taken out of service in 1999.

A Phase I and Phase II performed in 2018 and 2019 (AME 2018 & AME 2019), confirmed soil and groundwater impacted by petroleum constituents at numerous locations where USTs were previously in use, on portions of the hospital site to the west and southwest of the Subject Site. A No Further Action (NFA) determination was issued by IDEM in 1996 for a LUST incident (# 199109541) (VFC Documents # [80326653](#) & [82615563](#)). However, other USTs appear to potentially be present on the hospital properties and may not have been removed or have not received closure from IDEM.

Commercial Cleaners, 817 W. 1<sup>st</sup> Street

This property, 115 feet west of the Subject Site, was reportedly a dry-cleaning facility between 2002 and 2014 according to the EDR radius report. No other information

about this property was discovered during this investigation.

#### Other Sites

The following adjoining or nearby sites were listed in the EDR report as being historical drycleaner sites:

- *Wayne Cleaners, 610 S. Rogers Street*, was located north of the Subject Site (northeast corner of the former IU Health Bloomington Hospital (Parcel A) site). It was referenced in the 1952 and 1955 Polk City Directories. The site is also shown on the 1947 Sanborn Map provided by EDR. No other information was found for this site.
- *Bill's Clothes Care, 420 W. 2nd Street*, was located across 2nd and Rogers Streets to the northeast of the Subject Site. Alternate names used for this business were Hill's Maytag Laundry, Hopewell Maytag Laundry, and Chapman Maytag Laundry. It was referenced in the 1960, 1963, 1966, 1969, 1972, 1973, 1974, and 1977 Polk City Directories. No other information was found for this site.
- *Launderette, 515 W. 2nd Street*, was located to the north of the Subject Site (northern portion of the former IU Health Bloomington Hospital (Parcel A) site). It was referenced in the 1958 Polk City Directory. No other information was found for this site.

### **4.3 Physical Setting**

As estimated from the U.S. Geologic Survey 7.5 Minute Series Topographic Quadrangle Map for Bloomington, Indiana (1966; photo revised 1990; C.I. = 10 feet), the elevation of the site varies between approximately 760 to 810 feet above mean sea level, relative to the North American Vertical Datum of 1929. The Subject Site is situated on a crest and ridge line with sloping terrain that declines in elevation towards the east, south, and west. Surface drainage in the area of the Subject Site east of Fairview St. is generally to the east-southeast toward a Clear Creek tributary located 0.23 miles east of the Subject Site. Surface drainage in the area of the Subject Site west of Fairview St. is generally to the west-southwest toward a Clear Creek tributary located 0.17 miles southwest of the Subject Site. However, surface drainage at the Subject Site is also influenced somewhat by the adjacent streets and municipal storm water system.

#### **4.3.1 Soils**

As described in the *Web Soil Survey, Custom Soil Resource Report for Monroe County, Indiana*, and accessed on May 2, 2022, there are two (2) soil map units within the Subject Site:

##### *Crider-Urban Land Complex 6-12% Slopes (CtC), 42%*

Crider-Urban land complex soils with 6 to 12 percent slopes consist of well drained, sloping soils situated on the shoulder and backslope of hills, formed from loess

over clayey residuum.

*Crider-Urban Land Complex 2-6% Slopes (CtB), 58%*

Crider-Urban land complex soils with 2 to 6 percent slopes consist of well drained, sloping soils situated on the shoulder and summit of hills, formed from loess over clayey residuum. (Appendix D)

#### **4.3.2 Surficial Geology**

The area of the Subject Site is underlain by approximately 5 to 25 feet of unconsolidated deposits that lie on Mississippian age bedrock (Fenelon, et al, 1994). Total thickness of unconsolidated deposits overlying bedrock in Monroe County is commonly reported as 6 to 25 feet. The unconsolidated sediments consist of Terra Rossa – red, clayey regolith, 5 to 50 feet thick, over limestone of Middle Mississippian age.

#### **4.3.3 Bedrock Geology**

The Subject Site and surrounding area lie within the Mitchell Plateau physiographic unit within the Southern Hills and Lowlands regional physiographic province (Gray, 2000). The Mitchell Plateau is bounded by the older rocks of Norman Upland on the east and the younger rocks of the Crawford Upland to the west. The Mitchell Plateau (also referred to as the Mitchell Plain) is a karst area in Indiana of relatively low relief. An extensive underlying cave system developed in Mississippian age limestone bedrock. Surface drainage is rare due to most streams in the area disappearing into caves or joints within the rock.

Bedrock at the site is reported to be the Mississippian-aged Sanders Group (that includes the Harrodsburg and Salem Limestones). The Sanders Group consists of a variety of carbonate rocks in complex facies relationships. The Ramp Creek and Muldraugh Formations at the base of the group are dominantly a mixture of fine-grained dolomite and limestone. Cherty and siliceous intervals are common, and minor amounts of siltstone and shale are present. Above that interval in the Harrodsburg Limestone, well-cemented bioclastic calcarenites and calcirudites are dominant over argillaceous limestone, dolosiltites, and shale. The abundance of geodes and chert decreases upward in the group. The Salem Limestone except for the Somerset Shale Member at its base is dominated by porous calcarenite, although it contains a wide variety of other kinds of limestone.

#### **4.3.4 Hydrology**

*Surface Water*

The Subject Site lies within the East Fork White River basin, which has a total drainage area of 5,746 square miles in south-central Indiana. In general, drainage of the Mitchell Plain (including the Subject Site) in Monroe County is considerably different from the rest of the basin; most runoff quickly leaves the surface by entering sinkholes and becoming part of the ground-water system. In the streams that do flow across the Mitchell Plain, some surface water is intercepted by swallow holes and diverted underground into either the groundwater system or

subterranean channels. Surface water drainage in the area of the Subject Site east of Fairview St. is generally to the east-southeast toward a Clear Creek tributary located 0.23 miles east of the Subject Site. Surface drainage in the area of the Subject Site west of Fairview St. is generally to the west-southwest toward a Clear Creek tributary located 0.17 miles southwest of the Subject Site.

#### *Unconsolidated Aquifer System*

The Subject Site lies in the Dissected Till and Residuum / Unglaciated Southern Hills and Lowlands Aquifer System. Total thickness of unconsolidated deposits overlying bedrock is commonly 6 to 25 feet. Clay material dominates this unconsolidated aquifer system; however, discontinuous sand or gravel deposits are reported. These deposits are commonly 1 to 3 feet thick. Because of low permeability of surface materials, this system is not considered very susceptible to contamination from surface sources.

#### *Bedrock Aquifer System*

The Blue River and Sanders Groups occur as the uppermost bedrock aquifer system over most of the west-central portion of Monroe County. Depth to bedrock is generally between 5 and 30 feet. The Blue River and Sanders Groups Aquifer System is not regarded as a major ground-water resource in the county. Static water levels range from 0 feet to 197 feet below land surface but generally between 15 and 75 feet below surface. Areas of shallow bedrock, especially where joints, fractures, and solution features are present, may allow contamination. These conditions warrant considering the aquifer system as a whole to be susceptible to contaminants introduced at and near land surface.

A report pertaining to the nearby Indiana Gas Company site 0.4 miles to the north-northeast suggests the groundwater flow direction is to the southeast (VFC Document # [47437557](#)). Based on environmental reports for the Josephine Brown Trust Property 0.45 miles northeast of the Subject Site, local groundwater flow around the Subject Site is to the south to southeast (VFC Document # [14582194](#)). Regional groundwater flow of the area is predominately to the south in general conformance with surface topography/drainage and the regional attitude of underlying bedrock.

The City of Bloomington is served by a public water supply.

## **4.4 Historical Use Information on the Property**

### **4.4.1 Sanborn Fire Insurance Maps**

Sanborn Fire Insurance Maps were searched by *EDR* on April 28, 2022 and reviewed by BCA. Maps covering the Subject Site for the years 1927, 1947, and 1963 were reviewed. Copies of the Sanborn Maps are included in Appendix E. The descriptions for each map reviewed are provided below:

#### Sanborn Maps – 1907 & 1913

These maps do not depict the Subject Site.

These photographs show the Subject Site has been commercially developed with no residential properties remaining.

#### 1998 – 2016 Aerial Photographs

These photographs clearly shows the power generation facility attached to the hospital north of the Subject Site. These photos also show the presence and arrangement of structures at the Subject Site appear to be in the same configuration as they were during the Subject Site reconnaissance.

### **4.4.3 City and County Directories**

A search of city and county directories was performed by *EDR* on May 03, 2022 and reviewed by BCA. Directories were searched from 1964 (the earliest reviewed) through 2017 for the Subject Site. ## **5.0 SITE RECONNAISSANCE**

### **5.1 Methodology and Limiting Conditions**

The main site reconnaissance was conducted on April 12, 2022 by Mr. Chris Jones, Field Geologist, and Mr. Rod Manny, Staff Geologist of BCA, and accompanied by Mr. Randy Sink, maintenance representative for IU Health. The site visit included observation of the Subject Site and adjoining sites for environmentally significant items, such as transformers, storage tanks, unusual cracks or ground discoloration, as well as significant commercial or industrial activity. Photographs were taken of conditions at the time of the site visit. During the site visit evaluation of adjoining properties were limited to observations from public rights-of-way or other public areas.

Notes of observations made during the site visit were made in a notebook and/or marked on a site map. Photographs were taken of items of interest.

### **5.2 General Site Setting**

The Subject Site is situated in the City of Bloomington in a mixed residential/commercial area. The Subject Site currently has ten (10) unoccupied commercial buildings and one (1) unoccupied maintenance shed. The remainder of the property is covered with paved parking.

### **5.3 Exterior Observations**

The Subject Site currently has 10 unoccupied commercial buildings and one (1) unoccupied maintenance shed (photos 1-4). City water, electricity, gas, and sewer services are currently available to the Subject Site.

The following were observed during the reconnaissance of the exterior of the Subject Site:

- A concrete pad with two (2) fill ports and two (2) vent pipes was observed along the west side of the power generation facility. The ports and vent pipes are consistent with UST fill ports and vent pipes (photos 5-7).

## **6.0 INTERVIEWS**

### **6.1 Interview with Site Owner**

The Subject Site is currently owned by Indiana University Health Bloomington Inc. Mr. Randy Sink, maintenance representative for IU Health, answered questions on behalf of the site owner about his knowledge of the Subject Site on April 26, 2022. Mr. Sink stated that his understanding of the past uses of the property were as support facilities for the IU Health Bloomington Hospital. Mr. Sink indicated that he had no knowledge of any environmental liens or AULs filed or recorded against the property. He also indicated that he was not aware of any spills or chemical releases that have taken place on the site. He was not aware that any environmental assessments or enforcement actions were ever implemented on the Subject Site.

### **6.2 Interview with Site Manager**

See Section 6.1 above.

### **6.3 Interview with Site Occupant**

See Section 6.1 above.

### **6.4 Interview with Local Government Official**

BCA contacted Monroe County Health Department on 05/03/2022 requesting any information they might have concerning environmental issues for the Subject Site. Mrs. Ashley Bergquist, MPH, Environmental Health Services Manager, responded (05/04/2022) and indicated that they had one (1) report on file regarding the Subject Site. The complaint describes the improper disposal of medical waste found on the sidewalk and street gutter near or on the Subject Site at 717 W. 1<sup>st</sup> Street.

### **6.5 Interview with Others**

Mr. Larry Allen, Assistant Attorney, City of Bloomington, and representative for Bloomington Redevelopment Commission, was interviewed via e-mail on April 29, 2022. Mr. Allen indicated that he has no knowledge of any environmental cleanup liens or activity and land use limitations (AULs) associated with the Subject Site. Mr. Allen stated that the purchase price for the property does reflect fair market value. Mr. Allen is aware of the past uses of the property; however, he is not aware of any specific chemicals used, does not know of any spills or chemical releases, and is not aware of any environmental cleanups at the property. Mr. Allen indicated that he is unaware of any obvious indicators of the presence or likely presence of a release or releases on the property. Mr. Allen completed the AAI User Questionnaire (dated 04/29/2022). A signed copy of the questionnaire is provided in Appendix C.

## 7.0 EVALUATION

### 7.1 Findings

Phase I findings identify known or suspected environmental conditions associated with the property, including recognized environmental conditions (REC), controlled recognized environmental conditions (C-REC), historical recognized environmental conditions (H-REC), vapor encroachment conditions (VEC) and *de minimis* conditions, among other environmental conditions. *De minimis* conditions are those that are judged to not to present a material risk of harm to health or the environment. Controlled RECs include past releases that have been addressed to the satisfaction of the applicable regulatory authority, with contaminants allowed to remain in place subject to the implementation of required controls. Historical RECs include records of past releases that have been remediated to the satisfaction of the governing regulatory agency. Vapor Encroachment Conditions (VECs) are potential releases that involve volatile organic compounds that could result in vapor intrusion to structures on the subject site. BCA's opinions regarding each of the findings below are listed in Section 7.2. The following environmental conditions were found during this investigation:

1. IU Health Hospital (Parcels C & D) (Subject Site), 608 W. Wylie Street  
The Subject Site was historically residential until sometime between 1965 and 1977 when it was developed as commercial/medical offices including a power generation facility for the IU Health Bloomington Hospital (Parcel A) site north of the Subject Site. This operation included three (3) 20,000 gallon diesel USTs. One (1) 500 gallon diesel UST was also present on the Subject Site behind the Olcott Center at 619 W. 1<sup>st</sup> Street.
  - The three (3) 20,000-gallon diesel USTs and one (1) 500-gallon diesel UST were historically present on the Subject Site; however, the two (2) 20,000 diesel USTs likely remain along the west side of the exterior of the power generation facility after being removed, re-certified, and reinstalled in 1991. Fill ports and vent pipes were identified during the reconnaissance of the Subject Site. The historical and current presence of these diesel USTs is a REC and VEC.
  - An automotive repair area was observed on the Subject Site in the auto repair shop directly east of the power generation facility. Multiple floor drains were observed near overhead doors. None of the drains showed any signs of significant staining or other evidence that petroleum products or hazardous substances had ever been placed or spilled into them. However, the possible release of chemicals associated with the historical automotive service area on the Subject Site a REC and VEC since the types and amounts of chemicals historically used are unknown.
  - Four (4) pole-mounted and two (2) pad-mounted electrical transformers

were observed on the Subject Site. No labeling or other indication of PCB content was visible on the transformers, however, all of them appeared to be in good condition, with no staining or other visual evidence of leakage or spillage. The transformers are likely owned by the electrical utility who would be responsible for any spills or leakage. This is a *de minimis* condition.

- Numerous storm drains were observed throughout the parking lot areas of the Subject Site. No evidence that any petroleum or hazardous materials have ever been spilled or placed in the storm drains was observed. This is a *de minimis* condition.
- Several floor drains were observed in utility rooms and bathrooms throughout the buildings. None of the drains showed any signs of significant staining or other evidence that petroleum products or hazardous substances had ever been placed or spilled into them. This is a *de minimis* condition.

2. IU Health Bloomington Hospital (Parcel A), 601 W. 2nd Street

This property, adjacent to the Subject Site to the north across W. 1<sup>st</sup> Street operated as a hospital since at least 1967 and was a large quantity generator (LQG) of hazardous medical waste. A 1992 VFC document, #[22512698](#), indicates that numerous USTs were present on the property. Given that most hospitals utilize back-up generators and heat sources supplied by fuel in USTs, it is possible that some USTs could remain on the property. An NFA determination was made by IDEM in 1996 for a LUST incident on the property, but no letter could be located in the public file regarding this determination.

3. Commercial Cleaners, 817 W. 1<sup>st</sup> Street

This property, 115 feet west of the Subject Site, was reportedly a dry-cleaning facility between 2002 and 2014 according to the EDR radius report. No other information about this property was discovered during this investigation. Due to the down gradient location relative to the Subject Site, this property is considered a *de minimis* condition with respect to the Subject Site.

4. The following adjoining or nearby sites were listed in the EDR report as being historical drycleaner sites:

- *Wayne Cleaners, 610 S. Rogers Street*, was located north of the Subject Site (northeast corner of the former IU Health Bloomington Hospital (Parcel A) site). It was referenced in the 1952 and 1955 Polk City Directories. The site is also shown on the 1947 Sanborn Map provided by EDR. No other information was found for this site.
- *Bill's Clothes Care, 420 W. 2nd Street*, was located across 2nd and Rogers Streets to the northeast of the Subject Site. Alternate names

used for this business were Hill's Maytag Laundry, Hopewell Maytag Laundry, and Chapman Maytag Laundry. It was referenced in the 1960, 1963, 1966, 1969, 1972, 1973, 1974, and 1977 Polk City Directories. No other information was found for this site.

- *Launderette, 515 W. 2nd Street*, was located to the north of the Subject Site (northern portion of the former IU Health Bloomington Hospital (Parcel A) site). It was referenced in the 1958 Polk City Directory. No other information was found for this site.

No other information was found for each of these sites, and it is unknown if they were drycleaners and/or ever used/handled chlorinated solvents. However, chlorinated solvents were not detected in any of the soil/groundwater sampling probes installed on the Subject Site during the Phase II by AME in 2019, or on the nearby 413 W. 2<sup>nd</sup> Street property during the 2021 BCA Phase II ESA, so it is unlikely that a release from any of these sites (if any) have materially affected the environmental conditions of the Subject Site. They are considered *de minimis* with respect to the Subject Site.

#### 5. Other Sites

In addition to the sites listed above, two (2) Federal CERCLIS NFRAP (SEMS – Archive) sites, two (2) RCRA Corrective Action sites, nine (9) State Listed Cleanup sites, two (2) Solid Waste Landfill or solid waste disposal facility sites, 20 LUST sites, one (1) Voluntary Cleanup sites, and 15 State and U.S. Brownfield Program sites are located within the respective search radii of the ASTM and AAI Standard. However, these sites are located downgradient from the Subject Site, have received No Further Action status, or are low priority w/ soil contamination only. As such, these sites are considered *de minimis* conditions with respect to the Subject Site.

## 7.2 Opinion

### 7.2.1 Contaminant Migration

If a release occurred on or near the Subject Site, it is likely to migrate vertically until contact with groundwater or bedrock and then laterally in the down-gradient direction. Based on local surface topography, groundwater flow in the area of the Subject Site east of Fairview St. is generally to the east-southeast toward a Clear Creek tributary located 0.23 miles southeast of the Subject Site. Groundwater flow in the area of the Subject Site west of Fairview St. is generally to the west-southwest toward another tributary of Clear Creek located 0.17 miles southwest of the Subject Site. However, surface drainage at the Subject Site is influenced somewhat by the adjacent streets and municipal storm water system. All RECs will be assessed based on individual location in relation to the Subject Site.

Because of the above considerations, releases at properties located to the north (upgradient) of the Subject Site could potentially have an impact on the Subject

Site. Releases at properties immediately adjoining to the northeast and northwest (cross-gradient) of the Subject Site could impact the Subject Site only if they are very near; however, releases farther away in these directions would not. Because radial spread of contaminants is common at the source, especially in the shallow soil or smear zone at the top of the water table, releases that took place very near the Subject Site may have affected it even if the property is downgradient (southeast, south, and southwest) of the Subject Site.

Vapors from releases to the groundwater could migrate through the subsurface via loose and unconsolidated soils, utility conduits and trenches, and disturbed or excavated soils. Vapors can accumulate beneath structures, asphalt and concrete pads or parking lots, and in poorly ventilated buildings. Vapors from sources and impacted groundwater near the Subject Site could impact structures around the Subject Site. The current IDEM guidance indicates potential for vapor intrusion from groundwater impacted above screening levels at a lateral distance of 25 feet for petroleum and 100 feet for chlorinated volatile organic compounds.

### **7.2.2 Evaluation of Identified Environmental Conditions**

This section presents BCA's opinions regarding RECs and VECs identified in Section 7.1.

1. IU Health Bloomington Hospital (Parcels C & D) (Subject Site), 608 W. Wylie St.

The Subject Site was historically residential until between 1965 and 1977 when it was developed as commercial/medical offices including a power generation facility for the Bloomington Hospital north of the Subject Site. This operation included three (3) 20,000-gallon diesel USTs. One (1) 500-gallon diesel UST was also observed on the Subject Site behind the Olcott Center at 619 W. 1<sup>st</sup> Street. In addition, a former automotive repair area was historically present in the ambulance repair shop directly east of the power generation facility. The types and amounts of chemicals historically used in the maintenance of vehicles is unknown.

The possible historical release of chemicals associated with the former automotive service area as well as the unknown status of the diesel USTs on the Subject Site is an environmental concern.

2. IU Health Bloomington Hospital (Parcel A), 601 W. 2nd Street

This property, adjacent to the Subject Site to the north across W. 1<sup>st</sup> Street operated as a hospital since at least 1967 and was a large quantity generator (LQG) of hazardous medical waste. A 1992 VFC document, #[22512698](#), indicates that numerous USTs were present on the property. Given that most hospitals utilize back-up generators and heat sources supplied by fuel in USTs, it is possible that some USTs could remain on the property. An NFA determination was made by IDEM in 1996 for a LUST incident on the property, but no letter could be located in the public file regarding this determination. The

potential presence of the petroleum USTs on this adjacent site is an environmental concern.

### **7.3 Conclusions**

We have performed a Phase I Environmental Site Assessment of the Subject Site located at 608 W. Wylie Street, Bloomington, Indiana in conformance with the scope and limitations of ASTM Practice E1527-13. Exceptions to, or deletions from this practice are described in Section 2.5 of this report. Detailed findings and opinions regarding the Subject Site and surrounding sites are included in Sections 7.1 and 7.2 above. This assessment has revealed no evidence of Recognized Environmental Conditions currently in connection with the property, except:

1. IU Health Bloomington Hospital (Parcels C & D) (Subject Site), 608 W. Wylie St.

The Subject Site was historically residential until between 1965 and 1977 when it was developed as commercial/medical offices including a power generation facility for the Bloomington Hospital north of the Subject Site. This operation included three (3) 20,000-gallon diesel USTs. One (1) 500-gallon diesel UST was also observed on the Subject Site behind the Olcott Center at 619 W. 1<sup>st</sup> Street. In addition, a former automotive repair area was historically present in the ambulance repair shop directly east of the power generation facility. The types and amounts of chemicals historically used in the maintenance of vehicles is unknown.

The possible historical release of chemicals associated with the former automotive service area as well as the unknown status of the diesel USTs on the Subject Site is an environmental concern.

2. IU Health Bloomington Hospital (Parcel A), 601 W. 2nd Street

This property, adjacent to the Subject Site to the north across W. 1<sup>st</sup> Street operated as a hospital since at least 1967 and was a large quantity generator (LQG) of hazardous medical waste. A 1992 VFC document, #[22512698](#), indicates that numerous USTs were present on the property. Given that most hospitals utilize back-up generators and heat sources supplied by fuel in USTs, it is possible that some USTs could remain on the property. An NFA determination was made by IDEM in 1996 for a LUST incident on the property, but no letter could be located in the public file regarding this determination.

The potential presence of the petroleum USTs on this adjacent site is an environmental concern.

**ALL APPROPRIATE INQUIRY USER QUESTIONNAIRE**

PROJECT DESCRIPTION: Hospital Property (Parcels C&D) PROJECT NO: 22-143

SITE ADDRESS: 608 W. Wylie Street, Bloomington Indiana

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the “*Brownfields Amendments*”), the *user* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that “*all appropriate inquiry*” is not complete.

**(1.) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).**

Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the *property* under federal, tribal, state or local law?

NOTE 1— In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

Yes

No

**(2.) Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).**

Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 above) identify any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *property* and/or have been filed or recorded against the *property* under federal, tribal, state or local law?

Yes

No

**(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).**

As the *user* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business? If yes, please describe as specifically as possible.

Yes

No

**(4.) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).**

(a.) Does the purchase price being paid for this *property* reasonably reflect the fair market value?

Yes  No

(b.) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

Yes  No

If yes, please explain:

**(5.) Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30)**

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example,

(a.) Do you know the past uses of the *property*?

Yes  No

(b.) Do you know of specific chemicals that are present or once were present at the *property*?

Yes  No

(c.) Do you know of spills or other chemical releases that have taken place at the *property*?

Yes  No

(d.) Do you know of any environmental cleanups that have taken place at the *property*?

Yes  No

**(6.) The degree of obviousness of the presence of likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).**

As the *user* of this *ESA*, based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of releases at the *property*?

Yes  No

If yes, please describe as specifically as possible.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### ***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/25/2022 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States

## EXECUTIVE SUMMARY

from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

**Environmental Interest/Information System:**

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System:**

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### *Lists of Federal NPL (Superfund) sites*

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

## ***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

## ***Lists of Federal RCRA generators***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. ## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

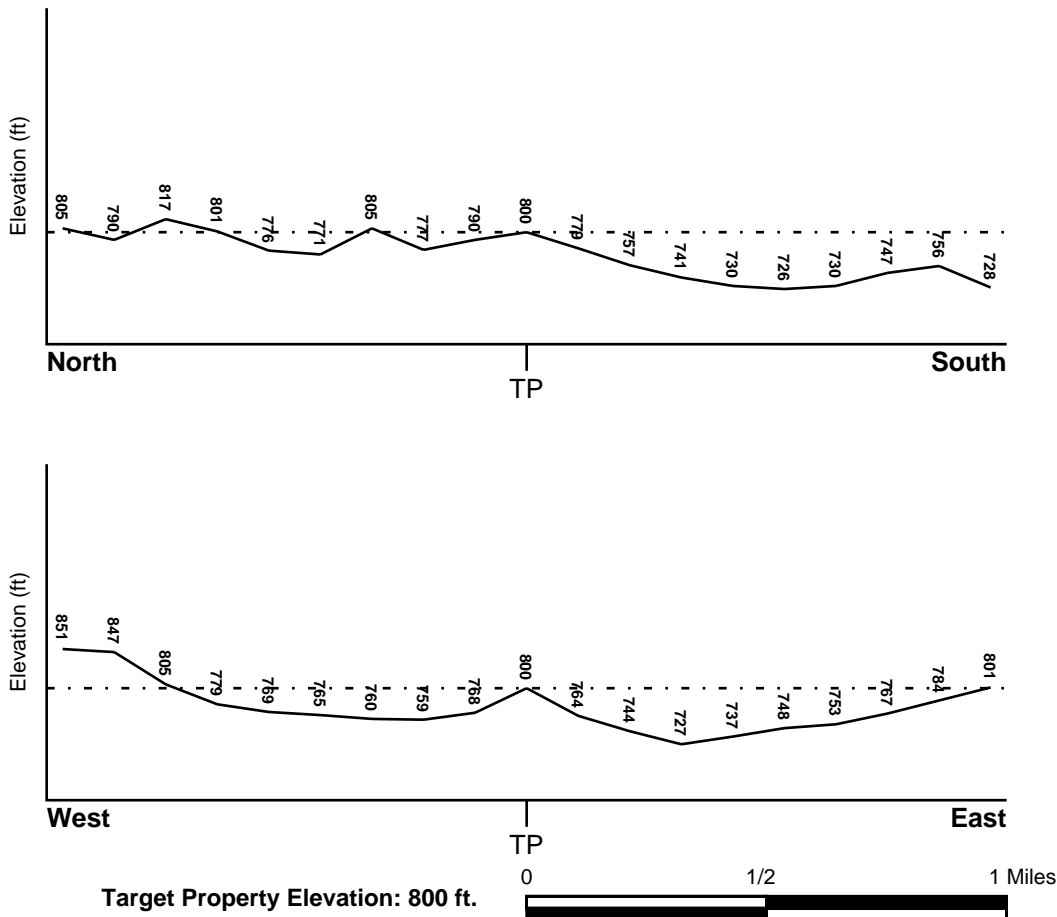

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

# Preface

---

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (<http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/>) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (<https://offices.sc.egov.usda.gov/locator/app?agency=nrcs>) or your NRCS State Soil Scientist ([http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2\\_053951](http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951)).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

# How Soil Surveys Are Made

---

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

## Custom Soil Resource Report

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

### MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

## Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however,

## Custom Soil Resource Report

onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

**Hospital Property – Parcels C & D  
608 W. Wylie Street  
Bloomington, Monroe County, Indiana 47404**

**April 4, 2022**

The Hospital Property (Parcels C & D) is a portion of the former Indiana University (IU) Health Bloomington Hospital property (Subject Site). Parcels & D consists of a total of 6 separate parcels (3 properties), occupying approximately 6.15 acres of land, and is bordered by W. 1<sup>st</sup> Street to the north, S. Rogers Street to the east, residential parcels and W. Wylie Street to the south, and residential parcels to the west.

The following addresses/parcel ID numbers are associated with the Subject Site:

<b>Address</b>	<b>Parcel IDs</b>	<b>Parcels w/ same ID</b>
608 Wylie Street	53-08-05-100-014.000-009	1
717 W. 1st Street	53-08-05-100-028.000-009	3
727 W 1st Street	53-08-05-402-115.000-009	2

Improvements on the Subject Site consist of a former IU University Health Center building, a former IU Health power plant, former emergency medical transport services building; a former wellness center, a former IU medical services plaza, and three (3) smaller support buildings (all currently listed at 608 W. Wylie St.); a former IU Health human resources building and an IU Health home care building (both currently listed at 717 W. 1<sup>st</sup> St.); and a former IU Health clinical research & rehabilitation services building (currently listed at 727 W. 1<sup>st</sup> St.). The remaining portions of the Subject Site consist of parking lots, access driveways, and grassy landscaping. Most of the buildings are currently being used as storage and are in the process of being cleaned out.

Based on information presented in a 2018 Phase I ESA (09/28/2018), environmentally significant operations on the Subject Site included:

- Historical listing site as a Large Quantity Generator of hazardous wastes including spent solvents, corrosives, metals (lead), PCBs, etc. with multiple past violations listed.

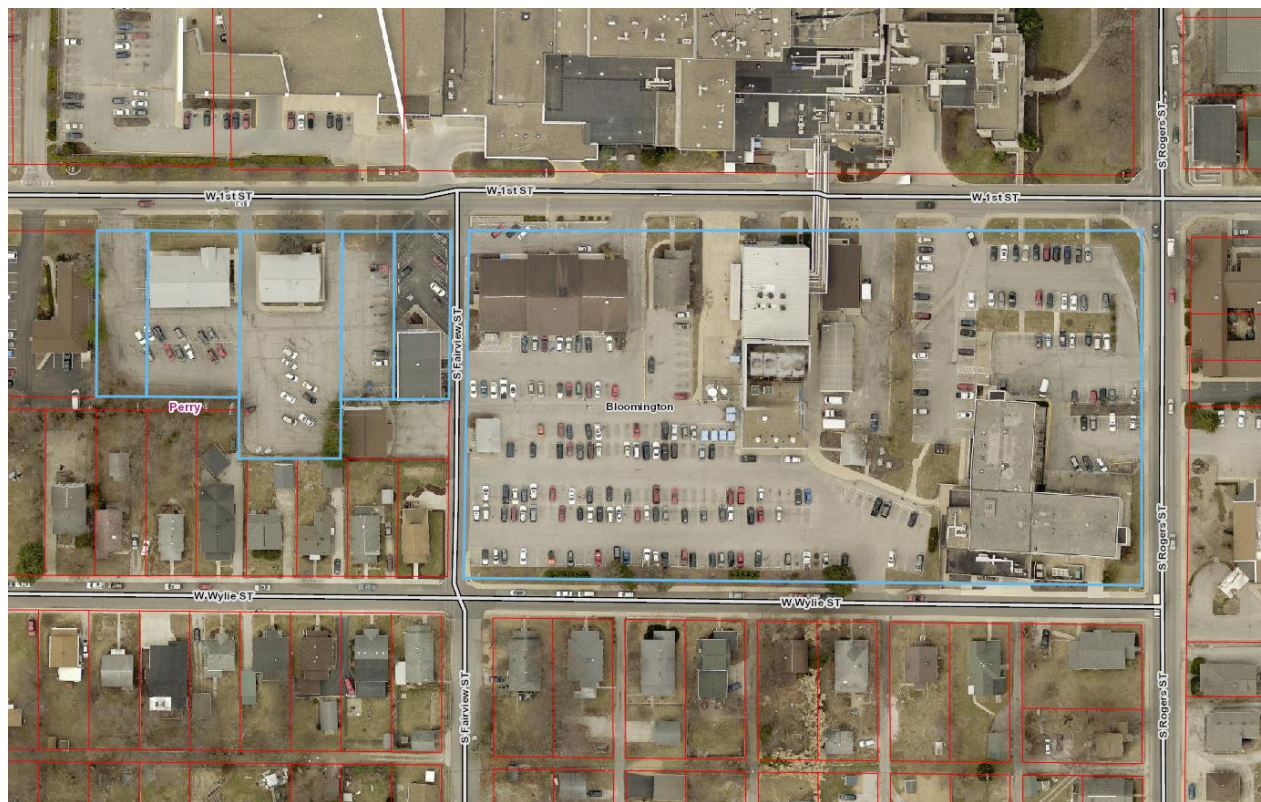

- There is the potential for asbestos and lead-based paint to be present in many of the onsite buildings due to their ages (1927 onward).
- The long-term use of the central portion of the adjacent IU Health “Parcel B” for automotive repair, painting, and other maintenance-related work, combined with the lack of documentation associated with a dry well cleanup, including the potential presence of solvents, paints, metals, PAHs, automotive products, and/or petroleum products in soils and/or groundwater.
- Historical use of several heating oil/diesel fuel USTs on the exterior of the current power plant which houses four (4) boilers.
- Long-term use of the abutting/hydraulically upgradient property (413 W. 2<sup>nd</sup> St.) as a bulk oil facility and gasoline filling station from at least 1927 to 1976.

Phase I & II Environmental Site Assessment (ESA) activities are necessary for the Site to facilitate a current transaction for the property and subsequent redevelopment. These activities are eligible for funding under the EPA Brownfields Assessment Grant for the City of Bloomington (Cooperative Agreement # BF 00E03051) and will help facilitate the safe redevelopment of the Site. The information presented below is accurate and complete to the best of our knowledge and belief.

## 2. Status and History of Contamination at the Site:

(a) Petroleum or hazardous substances contamination: There is the potential for hazardous substances contamination due to the historical operation of the site as a Large Quantity Generator of hazardous wastes including spent solvents, corrosives, metals (lead), PCBs, etc.; the operation of the adjacent IU Health "Parcel B" for automotive repair, painting, and other maintenance-related work, including the potential presence of solvents, paints, metals, PAHs, automotive products, and/or petroleum products in soils and/or groundwater; and the former use of potential petroleum products as fuel for onsite boilers and emergency backup generators.

(b) Operational History and Current Uses:

Operational history for the Subject Site includes: former IU University Health Center building, a former IU Health power plant, former emergency medical transport services building; a former wellness center, and a former IU medical services plaza (all currently listed at 608 W. Wylie St.); a former IU Health human resources building and an IU Health home care building (both currently

listed at 717 W. 1st St.); and a former IU Health clinical research & rehabilitation services building (currently listed at 727 W. 1st St.). Most of the buildings are currently being used as storage and are in the process of being cleaned out.

- (c) Environmental Concerns: The redevelopment or reuse of the Site may be complicated by potential hazardous substances contamination due to the historical operation of the site as a Large Quantity Generator of hazardous wastes including spent solvents, corrosives, metals (lead), PCBs, etc.; the operation of the adjacent IU Health “Parcel B” for automotive repair, painting, and other maintenance-related work, including the potential presence of solvents, paints, metals, PAHs, automotive products, and/or petroleum products in soils and/or groundwater; and the former use of potential petroleum products as fuel for onsite boilers and emergency backup generators. There is the potential for these materials to be present in onsite soil and/or groundwater. There is the potential for asbestos and lead-based paint to be present in many of the onsite buildings due to their ages (1927 onward).

(d) How Site Became Contaminated: Unknown
